ARBORIST REPORT

I have inspected one Pine at 978 San Anselmo Ave and have found the following:

Tree #1 Pine

- Tree has an approx. DBH of 72" and a height of approx. 45' tall
- Tree has very poor structure
- Tree has 2 codominant leaders
- The trunk of the tree 10' away from the neighbor's chimney
- If tree is cut back 10' from chimney tree will be pruned too excessively and not up to code with ANSI 300 standards

Conclusion: To meet fire/insurance requirements simply pruning the tree will not be up to par with ANSI 300 standards .

Recommendation: Recommend removal of tree and replanting with a native species.

Limitations

The health and hazard assessments in this report are limited by the visual nature of the assessment. No trees were climb to obtain an up-close examination of the exact nature of branch or trunk leader attachments. Aerial defects maybe obscured by foliage, branches or other trees. No trees were examined using invasive techniques. Structurally sound, healthy trees are wind thrown during severe storm events. Consequently, a conclusion that a tree that does/does not require corrective surgery or removal is not a guarantee of risk, hazard or sound health.

Note: I only inspected the tree(s) on this report

Sincerely,

Michael Queirolo
