

Slurry Seal: Do's & Don'ts

We need your help to achieve a successful sealing.

Do's

The Night Before:

- Remove all dumpsters and parked cars from the street
- Turn off sprinklers and pumps to protect the road surface from water during the curing
- Inform and/or reschedule deliveries and visitors.
- If it is your regular trash day, please put your cans at the curb before 7AM

The Day of:

- Drive on the street only after you are sure that it has been fully opened up to public traffic.
- Drive slowly and smoothly
- Please accept our appreciation for your efforts to help this be a success

Don'ts

- ⊗ Do not drive your car on the fresh slurry. **A cool surface and the absence of workers is not an indication that the road is ready for traffic: It still needs to cure.** Note the road closure times specified on your contractor notice.
- ⊗ Driving on the surface prematurely will damage the road as well as possibly your car and any concrete that you drive over with oil on your tires.
- ⊗ For at least 3 days, please avoid sharp u-turns, hard breaking, stationary power steering turns, fast acceleration.
- ⊗ To avoid spreading oil and to keep the jobsite safe for the workers, do not walk, bike, or allow your pets on the slurry until it is reopened to the public. Please plan ahead.
